

Adjusted relative effects are positive in all 12 plotted settings

Marker: (permission – ordinary request) – replacement-span effect · 100 template–page units

SUCAT · five-role probe

UAT · three-role probe

—●— Marker first - -○- - Marker second

User/Tool = mean User probability / mean Tool probability within each span; logs precede paired contrasts.
Mean adjusted Userness is negative at layer 12 with SUCAT and positive with UAT. No action outcomes measured.
Pointwise 95% paired-bootstrap intervals. Lines join the three measured layers; intervening layers are not displayed.
