

Held-out role recall varies by layer and split

GPT-OSS-20B · five-role probes · all 24 layers · 249 base texts in the full corpus

Prompt split: 124 held-out variants

Text split: 24 held-out base texts

—◆— System —●— User —▲— CoT —■— Assistant —▼— Tool

Color and marker shape identify the true role label of held-out neutral-text tokens. Recall is token-weighted. Separately fitted probes and different test sets; this evaluates role decoding under the neutral-text construction.
